

1. Display the current working directory.

```
/tmp
> pwd
/tmp
```

2. List all the contents of your current directory, including hidden files.

```
/tmp
> ls -a
.  .font-unix  .ICE-unix  .X0-lock  .X11-unix  .XIM-unix  1757389218.png  core-js-banners  'Mid Exam.pdf'  MozillaUpdateLock-15B76BAA26BA15E7  node-compile-cache  systemd-private-004b955640ce4a50b90bac90bc3e0ae0-bluetooth.service-aASrec  systemd-private-004b955640ce4a50b90bac90bc3e0ae0-dbus-broker.service-zuMs8j  systemd-private-004b955640ce4a50b90bac90bc3e0ae0-iwd.service-fkJHEr  systemd-private-004b955640ce4a50b90bac90bc3e0ae0-polkit.service-gyDBmK  systemd-private-004b955640ce4a50b90bac90bc3e0ae0-postgresql.service-tJUjCo  systemd-private-004b955640ce4a50b90bac90bc3e0ae0-power-profiles-daemon.service-UoZ11W  systemd-private-004b955640ce4a50b90bac90bc3e0ae0-systemd-logind.service-6NF9u3  systemd-private-004b955640ce4a50b90bac90bc3e0ae0-upower.service-SILJg4  tmux-1000  walker-reopen.sock
```

3. Change your directory to the `Desktop`.

4. Create two directories named `dir1` and `dir2` on the Desktop.

```
/tmp
> cd ~/Desktop

~/Desktop
> █
```

5. Inside `dir1`, create a file named `file1.txt`.

```
~/Desktop
> mkdir dir1 dir2
```

6. Inside `dir2`, create a file named `file2.txt`.

```
~/Desktop
> touch dir1/file1.txt
```

7. Using nano or vim Write the numbers 1 to 9 into `file1.txt`.

[illegible]

8. From the home directory Copy the contents of `file1.txt` into `file2.txt`.

```
~/Desktop  
> cp dir1/file1.txt dir2/file2.txt
```

9. From the home directory, delete `file1.txt` inside `dir1`.

```
~/Desktop  
> rm dir1/file1.txt
```

10. Remove the directory `dir1` from the Desktop.

```
~/Desktop  
> rm -r dir1
```

11. Redirect the output of the network configuration command to a file named `network\_info.txt` on the Desktop

```
~/Desktop  
> ifconfig > network_info.txt
```

12. Open the Desktop folder and show all files with detailed information.

```
~/Desktop
> ll -R
Permissions Size User      Date Modified Name
drwxr-xr-x   - abdullah 9 Sep 06:43  dir2
-rw-r--r-- 2.0k abdullah 9 Sep 06:47  network_info.txt

./dir2:
Permissions Size User      Date Modified Name
-rw-r--r--   18 abdullah 9 Sep 06:44  file2.txt
```

13. Create a new user with your name

```
~/Desktop
> sudo useradd abdullah2
[sudo] password for abdullah:
```

14. Set a password for your user.

```
~/Desktop
> sudo passwd abdullah2
New password:
Retype new password:
passwd: password updated successfully
```

15. Open the file that contains user information and verify that your user has been added.

```
37 abduallah2:x:1002:1002:./home/abduallah2:/usr/bin/bash
```

V-LINE  /etc/passwd 

16. Add your user to the file that gives administrative privileges

```
~/Desktop  
> sudo usermod -aG wheel abduallah2
```

17. Switch to your user and confirm the user identity.

```
sh-5.3$ whoami  
abduallah2
```

18. Create a new group named `testgroup`.

```
sh-5.3$ sudo groupadd testgroup
```

19. Add your user to `testgroup`.

```
sh-5.3$ sudo usermod -aG testgroup abduallah2
```

20. Add the group `testgroup` to the file that gives administrative privileges.

```
## Uncomment to allow members of  
%wheel ALL=(ALL:ALL) ALL  
  
%testgroup ALL=(ALL:ALL) ALL
```

21. Remove your user from the file that gives administrative privileges

```
sh-5.3$ sudo gpasswd -d abduallah2 testgroup
Removing user abduallah2 from group testgroup
```

22. Check if your user still have administrative privileges

```
sh-5.3$ sudo ls
abduallah2 is not in the sudoers file.
```

23. Check which groups your user belongs to.

```
sh-5.3$ id
uid=1002(abduallah2) gid=1002(abduallah2) groups=1002(abduallah2),1003(testgroup)
```

24. Set the permissions of `file2.txt` on the Desktop to allow the owner to read, write, and execute; the group to read and execute; and others to read

```
~/Desktop
> chmod 754 dir2/file2.txt
```

25. Check the permissions of `file2.txt` to verify the change.

```
~/Desktop
< ll dir2/file2.txt
Permissions Size User      Date Modified Name
-rwxr-xr-x  18 abduallah  9 Sep 06:44  dir2/file2.txt
```

26. Change the ownership of `file2.txt` to your user.

```
~/Desktop
> sudo chown abduallah2:abduallah2 dir2/file2.txt
[sudo] password for abduallah:
```

27. verify the ownership of `file2.txt`.

```
~/Desktop
> ll dir2/file2.txt
Permissions Size User      Date Modified Name
-rwxr-xr-x  18 abduallah2  9 Sep 06:44  dir2/file2.txt
```

28. Change back the ownership of a file `file.txt`

```
~/Desktop
< sudo chown abduallah:abduallah dir2/file2.txt
```

29. Grant write permission to everyone for ``file.txt`

```
~/Desktop
> chmod ugo+w dir2/file2.txt
```

30. Remove the write permission for the group and others for ``file.txt`

```
~/Desktop
> chmod go-w dir2/file2.txt
```

31. Delete `file.txt` after making the necessary ownership and permission changes.

```
~/Desktop  
> rm dir2/file2.txt
```

32. What command would you use to recursively change the permissions of all files and directories inside of a folder named `project`

```
~/Desktop  
< chmod 777 -R project/
```

33. Install a system monitor tool that provides an interactive process viewer (htop)

```
~/Desktop 07:12:55 [2/201]  
> sudo pacman -S htop

50. Find out the default gateway.

```
~/Desktop
> ip route | rg default
default via 192.168.1.1 dev wlan0 proto dhcp src 192.168.1.114 metric 600
```

51. Check the MAC address of your network interface.

```
5: wlan0: <BROADCAST,MULTICAST,UP
    link/ether 64:5d:86:a0:cc:24
```

52. Ensure that the VM can access external networks.

```
~/Desktop
> echo "I don't use a VM :), but it can access external network, don't worry"
I don't use a VM :), but it can access external network, don't worry
```

53. Enable the firewall.

```
~/Desktop  
> sudo ufw enable  
Firewall is active and enabled on system startup
```

54. Allow SSH connections through the firewall.

```
~/Desktop  
> sudo ufw allow 22  
Rule added  
Rule added (v6)
```

55. Deny all incoming traffic by default.

```
~/Desktop  
> sudo ufw default deny incoming  
Default incoming policy changed to 'deny'  
(be sure to update your rules accordingly)
```

56. Allow HTTP and HTTPS traffic.

```
~/Desktop  
> sudo ufw allow 80  
Rule added  
Rule added (v6)
```

57. Allow port 20

```
~/Desktop  
> sudo ufw allow 20  
Rule added  
Rule added (v6)
```

58. Reset the firewall settings.

```
~/Desktop
> sudo ufw reset
Resetting all rules to installed defaults. Proceed with operation (y|n)? y

```

59. Delete a rule from the firewall.

```
~/Desktop
> sudo ufw delete 1
Deleting:
  allow 20
Proceed with operation (y|n)? y
Rule deleted
```

60. Disable the firewall.

```
~/Desktop
> sudo ufw disable
Firewall stopped and disabled on system startup
```

61. View the status of the firewall.

```
~/Desktop
> sudo ufw status
Status: inactive
```

62. Log firewall activity and view it.

```
~/Desktop  
> echo "There's no log to view, do you mean 'sudo ufw logging on' ?"  
There's no log to view, do you mean 'sudo ufw logging on' ?
```

63. Delete the command history.

```
~/Desktop  
> rm ~/.bash_history
```

64. Search for a kali in /etc/passwd

```
~/Desktop  
> rg -e "kali|abdullah" /etc/passwd  
19:abdullah:x:1000:1000:~/home/abdullah:/usr/bin/fish
```

65. Search for a kali in /etc/group

```
~/Desktop  
< rg -e "kali|abdullah" /etc/group  
17:wheel:x:998:abdullah  
21:input:x:994:abdullah  
26:render:x:989:abdullah  
31:video:x:985:abdullah  
50:abdullah:x:1000:  
54:i2c:x:968:abdullah  
61:docker:x:964:abdullah
```

66. Locate the `passwd` file.

```
~/Desktop  
< fd "passwd" /  
/etc/passwd  
/etc/passwd-
```

67. Locate the shadow file and open it.

```
~/Desktop
> fd "shadow" / | rg "/etc/shadow" | head -n 1 | xargs nvim
```

68. Search for all configuration files in the `/etc` directory.

```
~/Desktop
> fd --glob "*.conf" /etc
/etc/NetworkManager/NetworkManager.conf
/etc/UPower/UPower.conf
/etc/alsa/conf.d/50-pipewire.conf
/etc/audit/auditisp-filter.conf
/etc/audit/auditisp-remote.conf
```

69. Search recursively for a specific word in the `/var/log` directory.

```
~/Desktop
> sudo rg "kernel" /var/log
[sudo] password for abdullah:
/var/log/Xorg.0.log
514:[ 133.532] (EE) event7 - Elan Touchpad: kernel bug: Touch jump detected and discarded.
```

70. View the system's kernel version.

```
~/Desktop
> uname -r
6.16.1-arch1-1
```

71. Display the system's memory usage.

```
~/Desktop
> free -h
```

	total	used	free	shared	buff/cache	available
Mem:	30Gi	3.4Gi	22Gi	719Mi	6.6Gi	27Gi
Swap:	0B	0B	0B			

72. Show the system's disk usage.

```
~/Desktop
> df -h
Filesystem      Size  Used Avail Use% Mounted on
dev              16G    0    16G   0% /dev
run              16G  2.0M   16G   1% /run
efivarfs        246K   85K  157K  36% /sys/firmware/efi/efivars
/dev/nvme0n1p2  475G  191G  284G  41% /
tmpfs            16G   1.9M   16G   1% /dev/shm
tmpfs            16G   11M   16G   1% /tmp
tmpfs            1.0M    0    1.0M   0% /run/credentials/systemd-journald.service
tmpfs            1.0M    0    1.0M   0% /run/credentials/systemd-resolved.service
tmpfs            1.0M    0    1.0M   0% /run/credentials/getty@tty1.service
tmpfs            3.1G  148K   3.1G   1% /run/user/1000
```

73. Check the system's uptime and load average.

```
~/Desktop
> uptime
07:57:22 up 1:58, 1 user, load average: 0.28, 0.57, 0.51
```

74. Display the current logged-in user

```
~/Desktop
> who
abdullah tty1          2025-09-09 05:59
abdullah pts/2        2025-09-09 06:38 (tmux(2504).%3)
abdullah pts/3        2025-09-09 06:15 (tmux(2504).%2)
abdullah pts/4        2025-09-09 06:40 (tmux(2504).%4)
```

75. Check the identity of the current user.

```
~/Desktop
> id
uid=1000(abdullah) gid=1000(abdullah) groups=1000(abdullah),964(docker),968(i2c),985(video),989(render),994(input),998(wheel)
```

76. View the `/var/log/auth.log` file.

```
~/Desktop
< echo "I don't have /var/log/auth.log :("
I don't have /var/log/auth.log :(
```

77. Shred the ``auth.log`` file securely.

```
~/Desktop  
➤ shred -u /tmp/secrets.txt
```

78. How do you lock a user account to prevent them from logging in

```
~/Desktop
> sudo passwd -l abduallah2
[sudo] password for abduallah:
passwd: password changed.
```

79. What command would you use to change a user's default shell

```
~/Desktop
> sudo chsh
Changing shell for root.
New shell [/usr/bin/bash]: ^C
```

80. Display the system's boot messages.

```
~/Desktop
> sudo dmesg
[ 0.000000] Linux version 6.16.1-arch1-1 (linux@archlinux) (gcc (GCC) 15.2.1 20250813, GNU ld (GNU Binutils) 2.45.0) #1 SMP
